# GET THEM PLAYING!

Soft Play is a fun and engaging activity that provides numerous benefits for children. Through crawling, climbing, jumping, and throwing activities, children can develop their gross motor skills, physical strength, balance, and agility. Soft play also encourages children to interact with others, fostering social skills like sharing, taking turns, and cooperating. Additionally, it can help stimulate sensory development by exposing children to different textures, colours, shapes, and sizes. This can encourage curiosity and learning about the environment. Soft play can also inspire imagination and creativity by allowing children to build structures and use equipment in different ways, keeping them entertained for hours on end.
